Restore Wizard ✕

**Select Application**

Choose which application's items you would like to restore. 

- Microsoft Active Directory**  
Restore users, groups and computer accounts (or individual attributes), Group Policy Objects, integrated DNS records and configuration partition objects to the production Active Directory.
- Microsoft Exchange**  
Find and restore individual mailbox items such as emails, appointments or contacts to the production mailbox, or locally to a MSG or PST file.
- Microsoft SharePoint**  
Find and restore individual documents, libraries and entire sites from a backup of the VM hosting SharePoint content database (SQL Server database files or blob storage).
- Microsoft SQL Server**  
Restore individual databases, tables, stored procedures and other SQL Server objects to a point in time back to the original or a different SQL server, or export them locally.
- Oracle Database**  
Restore individual databases to a point in time back to the original or a different server, or locally.
- Other applications**  
Restore individual items from any virtualized application by connecting to the application running directly from backup files in an isolated Virtual Lab with native management tools.
